

# Purple Martin Swapper Instructions

Questions? contact us at [sparrowswap@ncsu.edu](mailto:sparrowswap@ncsu.edu)

**Step 1: REMOVE & SWAP FAKE EGGS-** To increase adoption of replica eggs, remove and swap eggs AFTER the house sparrow (HOSP) has finished completely laying her clutch (typically around 4-6 eggs). During this step, try to be undetected by the female. Warm egg replicas in your hand or pocket, remove and place real eggs into container. Swap the same number of warmed replicas into the nest. Dispose of the real eggs by placing the clutch in a plastic bag and throwing it in the garbage to avoid attracting predators. To ensure that on subsequent nest visits you are able to discern whether the nest or eggs have been attended, either photograph the replica clutch in the nest and/or place a small object (a piece of grass or yarn) over the clutch. **If you are uncertain whether this nest belongs to a HOSP do not remove the eggs.**

**THIS IS VISIT #1 – FILL IN All VISIT #1' INFORMATION ON DATASHEETS**

**Step 2: FOLLOW-UP OBSERVATIONS-** Please observe the target nestbox for 3 visits (21 days) unless any bird lays an egg or something removes all of the replicas from the nest. Record the species using the nestbox, whether you see the parents, nestbox contents, and whether the nest is attended or abandoned during a follow-up visit 7 days after the initial swap (**Visit #2**). Visit again in 14 days (**Visit #3**) and 21 days (**Visit #4**) after the initial swap. Count the replicas at each visit to make sure no replicas are missing. **If you see signs of House Sparrow aggression** (including broken eggs, dead adults, injured chicks, or any other signs) **please write your observations the comments.**

**Step 3: END OBSERVATIONS -** If another HOSP egg(s) is laid after the initial swap, please remove the replicas and end that datasheet. On the same visit choose if you want to be a Remover, or Swapper for the new clutch and start a new datasheet accordingly. If no new eggs have been laid by Visit #4, remove the replicas and the nest from the nestbox. Dispose of the nest far away from the nestbox to avoid attracting predators.

**Step 4: PRINT AND MAIL OR ELECTRONICALLY SUBMIT DATASHEET(S)-** Datasheet(s) can be printed, filled out, and mailed to the address below. Datasheet(s) can also be filled out electronically and emailed to [sparrowswap@ncsu.edu](mailto:sparrowswap@ncsu.edu).

Mail to the museum at:
